

A new book by Dr Michelle Webster

“This book on holding in psychotherapy truly touches the reader and is one of those rare books from which one truly learns something. It gives us an inside view of people’s journeys in therapy and the power of touch in facilitating this journey. Michelle Webster confronts convention in a most thoughtful way and shows us how clients’ experiences of being held in therapy are highly therapeutic. She tells the story of physically holding clients in therapy, from both her and her clients’ perspectives, and in so doing deals delicately and sensitively with issues of how human beings relate in embodied ways to promote healing.”

Dr Leslie Greenberg, PhD. Professor of Psychology, York University.
